SUMMARY

Senior Software Engineer with 8+ years building enterprise web applications, known for pairing deep React/TypeScript expertise with a fearless willingness to dive into backend systems, infrastructure, and AI-driven engineering practices. I've directed product rebuilds, led complex migrations, and shipped full-stack features end-to-end, while mentoring engineers, speaking at conferences, and organizing the Denver Music && Tech meetup. My background as a software engineering instructor sharpens how I teach, communicate, and lead across technical and non-technical teams.

SKILLS

Frontend: React, TypeScript, JavaScript, Redux, Zustand, Vue.js, Vuex, GraphQL, Gatsby, Storybook, HTML, CSS, Webpack, Contentful, MUI
Backend & Infra: Node.js, Ruby, C#, .NET, Kotlin, PostgreSQL, AWS (Lambda, CDK, DynamoDB, EventBridge), Kubernetes, Helm, Docker, Azure DevOps
AI/LLM: Claude Code, OpenAI API, agentic development workflows, multi-agent orchestration
Testing & Tooling: Jest, Mocha/Chai, Cypress, Playwright, CI/CD (GitHub Actions), Git, Accessibility/WCAG

EXPERIENCE

Senior Software Engineer - Zylo

April 2025 - present

As a Senior Software Engineer at Zylo, I lead architecture across core enterprise product areas, including Contract Assist, multi-org DocuSign, and our Consumption Cost Management suite, while expanding into full-stack ownership of backend services powering licensing and workflow automation.

Key Contributions:

- Led frontend architecture for multi-org DocuSign integration and contributed to a full-stack Workflow Resends feature that shipped to general availability across the entire customer base, presented directly to company leadership.
- Spearheaded company-wide adoption of AI-assisted engineering practices (Claude Code), leading AI engineering strategy and representing the team at internal conferences and cross-functional AI working groups.
- Expanded into full-stack ownership of backend services for license modeling and workflow automation, with leadership crediting the transition with freeing up senior backend engineers to focus on new initiatives.
- Directed a full-week TanStack Query v4→v5 migration redesigning cross-app state architecture, and led complex UI work including high-performance sticky-column data tables and an accessibility overhaul of chart components.
- Won a company-wide hackathon for building an automated AI-driven E2E testing architecture.

Instructor - Turing School of Software & Design

April 2022 - October 2024

As an Instructor, I delivered lessons on programming fundamentals, including Ruby, React, and testing methodologies. I led efforts on curriculum development, professional development, and inclusion in technology while managing student codebases with pair programming and peer review.

Key Contributions:

- Streamlined curriculum to remove redundant information and focus on critical concepts, creating more space in the student/staff schedules for new content and project work time.
- Worked on internal software projects to automate calendar scheduling, grading, and student tracking.

Frontend Engineer - StackHawk *February 2020 - April 2022*

I led frontend development for the StackHawk platform, designing React architecture, implementing design systems, and developing RESTful API endpoints. I also led the initiative to rebuild the company's marketing site and contributed to the hiring process.

Key Contributions:

- Directed a product rebuild, achieving a 50% boost in performance and driving 100% growth in user traffic.
- Implemented end-to-end testing frameworks, accelerating code release cycles by 2 days and ensuring reliable, resilient software quality.
- Delivered workshops and presentations on application security automation and actively contributed to hiring and mentoring junior engineers.

Software Developer I - Frontier Airlines *March 2018 - February 2020*

At Frontier Airlines, I developed features for the booking platform in .NET and transitioned the frontend to a Vue.js SPA. I'm proud to have led accessibility initiatives in partnership with the Blind Institute of Technology to ensure an inclusive user experience.

Key Contributions:

- Coordinated efforts to enhance accessibility for visually impaired users and reduced user drop-off rates by 50% on accessible web components.
- Streamlined design-to-dev handoff, reducing iteration time from weeks to days.
- Coached high school interns and served on a company committee for aircraft naming.

VOLUNTEER

Organizer - Denver Music && Tech Meetup

September 2023 - January 2025

Organizer - Jamstack Denver Meetup

April 2019 - October 2020

PRESENTATIONS

Making Music With Code

Denver Music && Tech Meetup November 2023

How Developers Can Use Automated Security Testing To Protect Vue Apps

Vue.js Live 2021

Music && Technology

Jamstack Denver Meetup August 2020

EDUCATION

Turing School of Software & Design

Frontend Engineering - Certificate of Web Application Development

June 2017 - January 2018

University of Nebraska - Lincoln

Bachelor of Arts, Major in Chemistry, Minors in Mathematics and Humanities & Medicine

August 2009 - May 2014
